ENGISPHERE SUPPLY AND LINK COMPANY

Find • Supply • Link • Build

About Us

EngiSphere Supply and Link Company is a business concept focused on making it easier for customers to find, purchase, and receive engineering materials, industrial equipment, mechanical spare parts, and related products.

Our goal is to connect customers with reliable suppliers, simplify the sourcing process, and help individuals, workshops, construction projects, and industries access the products

they need.

Starting in Rwanda, our vision is to grow and serve customers across East Africa.

Our Mission

To make engineering materials and equipment easier to find, source, purchase, and deliver through reliable supply services and practical technology.

Our Vision

To become a trusted engineering supply and sourcing platform connecting customers, suppliers, and industries across Rwanda and East Africa.

Our Services

- **Engineering Materials Supply:** Metals, pipes, welding materials, and other engineering products.
- **Industrial Equipment:** Tools, workshop equipment, and machinery.
- **Mechanical Spare Parts:** Help customers source the parts required for machines and equipment.
- **Supplier Connections:** Connect customers with suitable suppliers.
- **Sourcing and Procurement:** Help customers find products based on their requirements.
- **Delivery Coordination:** Support the delivery of purchased products to customers.
- **Mechanical and Fabrication Services:** Future opportunities for repair, maintenance, welding, and metal fabrication.

Our Digital Platform

We aim to develop a digital platform that makes engineering procurement easier and more accessible.

Planned features include:

- Product search and online catalog.
- Product requests using text, photos, and voice messages.
- AI-assisted product identification and customer support.
- Supplier matching and quotation requests.
- Order management and status updates.
- WhatsApp Business integration.
- Delivery coordination and tracking.
- Secure payment integration where available.

Note: These are planned features. Their availability will depend on the development and integration of the required systems.

How It Works

1. Search: A customer searches for an engineering product or equipment.
2. Describe: The customer can provide a product name, photograph, or technical requirements.
3. Identify: The platform may use AI to help identify the product and clarify its specifications.
4. Source: The company checks suitable suppliers, availability, and prices.
5. Confirm: The customer reviews and confirms the quotation and order.

6. **Deliver:** The company coordinates delivery according to the agreed terms.

Product specifications, prices, supplier availability, and compatibility should be verified before an order is confirmed.

Who We Serve

- Mechanical engineers and technicians.
- Welding and metal fabrication workshops.
- Construction companies.
- Manufacturing businesses.
- Industrial maintenance teams.
- Hardware and engineering product retailers.
- Individual customers and other businesses.

Our Technology Goals

We intend to use suitable digital tools and existing AI services to improve customer communication, product discovery, supplier coordination, and order management without necessarily developing our own AI model.

The platform may incorporate website technology, messaging services, databases, and third-party APIs as development progresses.

Project Status

Current stage: Planning and development.

This repository is intended to support the development of the EngiSphere digital platform. Features, technologies, and integrations will be documented as they are implemented.

Future Development Roadmap

- [ ] Establish the project structure and requirements.
- [ ] Design the company website.
- [ ] Create a searchable engineering product catalog.
- [ ] Add customer product-request forms.
- [ ] Integrate WhatsApp Business.
- [ ] Explore AI-assisted photo, text, and voice requests.
- [ ] Build supplier and quotation management.
- [ ] Develop order management and delivery updates.
- [ ] Add appropriate payment and security integrations.
- [ ] Expand services across Rwanda and East Africa.

Business Location

Country: Rwanda
Initial target market: Rwanda
Long-term target market: East Africa

Contact

For business inquiries, supplier partnerships, or collaboration, please contact us through our official company communication channels once they are established.

- Company: EngiSphere Supply and Link Company
- Website: Coming soon
- Email: engispheresupplylink@gmail.com
- WhatsApp Business: To be announced

Contributing

We welcome ideas and collaboration that can help improve engineering product sourcing, customer service, supplier connections, and delivery coordination.

Please open an issue to propose a feature or report a problem once the project repository is ready for contributions.
